- Temperature beacon offline
- 22 King Street Toronto, ON, Canada

Gofleet's next-generation indoor and outdoor asset management solutions portfolio helps organizations to capture actionable real-time insights on asset location and condition along with other key parameters such as geofencing details, temperature and humidity monitoring, and much more. This enables organizations to improve their asset visibility and utilization and make informed decisions to ensuring compliance across their operations.
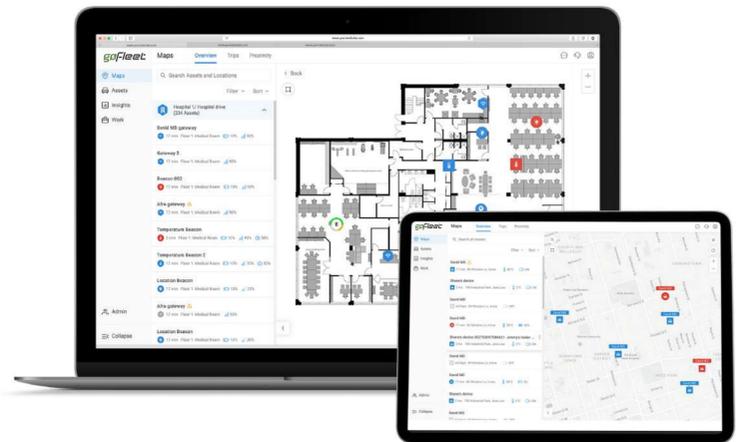

Key Features

Superior Accuracy for a Real-time View of Assets

Achieve real-time indoor and outdoor visibility, helping them locate assets and workforce with an accuracy radius of around two meters and without latency

Cloud-Based Temperature Monitoring Solution

Provides real-time updates on temperature change and deviation and offers real-time and historical temperature reports and ETAs with your customers

Interactive Dashboards for Informed Decision Making

In-depth dashboards and planning tools allow you to isolate individual assets to track their expenses and repair costs over time enabling you to make informed and cost-effective decisions

Simple Scalability and Maintenance-free Sensor Infrastructure

Robust, maintenance-free sensor infrastructure with built-in telemetry and monitoring capabilities, to remotely monitor the key positioning and condition details

Remote Visibility and Reliability with All-in-One Mobile APP

Remotely monitor and analyze the temperature and humidity status along with location details of any asset, thus helping to reduce the hours spent on manual monitoring

Benefits

Reduce staff inefficiency and cost

Reduce the time needed to manually locate asset and save countless hours of labor

Scheduling & tracking asset maintenance

Automatically gathering asset data and integrating it with maintenance management software to detect potential issues and schedule maintenance

**Locating missing assets & theft prevention**

Get notified when assets move outside or inside the specified area or when an anomaly is detected, thus will cut down theft and accidental loss

Increased safety on workplace

Improve operational safety and prevent accidents by warning workers of unsafe spaces and disabling equipment when it gets too close to people

Assets Infrastructure

Wired Asset Trackers

Temperature & Humidity Sensor

Door Sensor

Global Satellite Trackers

Solar & Long Life Battery Asset Trackers

Portable Parcel Tracker
